Office Action Summary

Application No.

10/066,147

Applicant(s)

NGUYEN, HUNG T.

Examiner

Tonia L Meonske

Art Unit

2183

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 20 August 2004.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-20 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-20 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892) *
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Witt et al., US Patent 5,651,125 in view of Preiss, US Patent 3,863,225.

3. Referring to claim 1, Witt et al. have taught a mechanism for resource allocation in a processor, comprising:

a. categorization logic, associated with an earlier pipeline stage, that generates instruction type information for instructions to be executed in said processor (column 13, lines 19-65, column 19, lines 21-40, In the decode stage the decoder decodes and generates an instruction opcode, or instruction type, and broadcasts to all of the functional units.); and

b. priority logic, associated with a later pipeline stage, that allocates functional units of said processor to execution of said instructions based on said instruction type information (column 13, lines 19-65, column 14, lines 6-15, The reservation stations are the priority logic that allocates functional units based on the opcode, or instruction type.).

4. Witt et al. have not specifically taught allocating functional units based on a predefined priority of said functional units. However, Preiss has taught allocating functional units based on a predefined priority of said functional units (abstract, column 3, lines 33-56). It would have

Art Unit: 2183

been obvious to one of ordinary skill in the art at the time the invention was made to have the invention of Witt et al., allocate functional units based on a predefined priority of said functional units, as taught by Preiss, for the desirable purpose of allowing a functional unit with a higher importance and urgency to execute instructions immediately.

5. Referring to claim 2, Witt et al. have taught the mechanism as recited in claim 1, as described above, and wherein said categorization logic causes said instruction type information to be stored and tagged in a queue containing said instructions (column 15, lines 56-61, column 23, lines 40-52, column 24, lines 36-52, Once the categorization logic, or decoder, broadcasts the opcodes to the functional units, it causes the opcode to be stored and tagged in a reservation station queue for a functional unit.).

6. Referring to claim 3, Witt et al. have taught the mechanism as recited in Claim 1, as described above, and wherein said earlier pipeline stage is a fetch/decode stage of said processor (column 13, lines 19-65, column 19, lines 21-40).

7. Referring to claim 4, Witt et al. have taught the mechanism as recited in Claim 1, as described above, wherein said instructions are ungrouped when said categorization logic generates said instruction type information (column 19, lines 21-40, column 13, lines 57-65).

8. Referring to claim 5, Witt et al. have taught the method as recited in Claim 1, as described above, and wherein said instruction type information defines at least four categories of instruction (Figure 1A, Branch, ALU, Shifter, Load, Store).

9. Referring to claim 6, Witt et al. have taught the mechanism as recited in Claim 1, as described above, and wherein said priority logic employs separate allocation schemes depending upon categories defined by said instruction type information (The instruction type information

Art Unit: 2183

defines the allocation scheme to be employed, i.e. a shift type opcode is allocated to the shifter functional unit and a branch type opcode is allocated to the branch functional unit.).

10. Referring to claim 7, Witt et al. have taught the mechanism as recited in Claim 1, as described above, and wherein said processor is a digital signal processor (abstract).

11. Referring to claim 15, Witt et al. have taught a digital signal processor (DSP), comprising:

- a. a pipeline having stages (column 5, lines 40-48, stages are inherent);
- b. functional units coupled to said pipeline (Figure 1, elements 90, 95, 105, 60, and 65);
- c. an instruction issue unit; coupled to said functional units, that wide-issues instructions for execution in said functional units (column 15, lines 41-56, Superscalar);
- d. categorization logic, associated with an earlier stage of said pipeline, that generates instruction type information for said instructions (column 13, lines 19-65, column 19, lines 21-40, In the decode stage the decoder decodes and generates an instruction opcode, or instruction type, and broadcasts to all of the functional units.); and
- e. priority logic, associated with a later stage of said pipeline, that allocates said functional units to said execution of said instructions based on said instruction type information (column 13, lines 19-65, column 14, lines 6-15, The reservation stations are the priority logic that allocates functional units based on the opcode, or instruction type.).

12. Witt et al. have not specifically taught allocating functional units based on a predefined priority of said functional units. However, Preiss has taught allocating functional units based on a predefined priority of said functional units (abstract, column 3, lines 33-56). It would have

Art Unit: 2183

been obvious to one of ordinary skill in the art at the time the invention was made to have the invention of Witt et al., allocate functional units based on a predefined priority of said functional units, as taught by Preiss, for the desirable purpose of allowing a functional unit with a higher importance and urgency to execute instructions immediately.

13. Claim 8 does not recite limitations above the claimed invention set forth in claim 1 and is therefore rejected for the same reasons set forth in the rejection of claim 1 above.

14. Claims 9 and 16 do not recite limitations above the claimed invention set forth in claim 2 and is therefore rejected for the same reasons set forth in the rejection of claim 2 above.

15. Claims 10 and 17 do not recite limitations above the claimed invention set forth in claim 3 and is therefore rejected for the same reasons set forth in the rejection of claim 3 above.

16. Claims 11 and 18 do not recite limitations above the claimed invention set forth in claim 4 and is therefore rejected for the same reasons set forth in the rejection of claim 4 above.

17. Claims 12 and 19 do not recite limitations above the claimed invention set forth in claim 5 and is therefore rejected for the same reasons set forth in the rejection of claim 5 above.

18. Claims 13 and 20 do not recite limitations above the claimed invention set forth in claim 6 and is therefore rejected for the same reasons set forth in the rejection of claim 6 above.

19. Claims 14 does not recite limitations above the claimed invention set forth in claim 7 and is therefore rejected for the same reasons set forth in the rejection of claim 7 above.

Response to Arguments

20. Applicant's arguments with respect to claims 1-20 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Art Unit: 2183

21. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a).

Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

22. A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

23. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tonia L Meonske whose telephone number is (571) 272-4170.

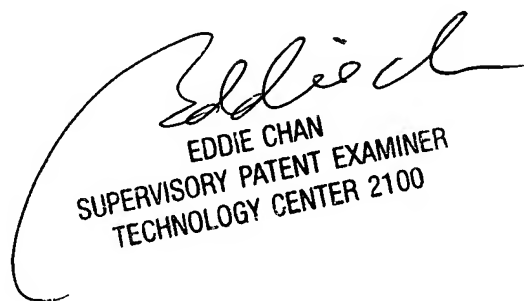

The examiner can normally be reached on Monday-Friday, 8-4:30.

24. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eddie P Chan can be reached on (571) 272-4162. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Art Unit: 2183

25. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
